* **_Adobe Photoshop Creative Suite 2010_ : ** This suite has the full Photoshop applications and programs in one box, with the option to purchase them separately if you need them. You can use the programs individually, but their better value as a bundle is demonstrated with its numerous tutorials for Photoshop, Illustrator, and other software. * **_Adobe Photoshop CS6_ : ** Every current version of Photoshop is available from Adobe. * **_Photoshop Elements 10_ : ** This full-featured, no-cost version of Photoshop is a great option for budding photographers, graphic artists, and other creatives who use photography but don't need Photoshop's more advanced features. * **_Indesign_ : ** This full-featured page-layout program is bundled with many of Adobe's Creative Suite products and is designed for professional designers who work in page layouts. # **Other Software** _**Microsoft Windows:**_ These programs are the foundation of any computer's operating system, and they control the programs and devices that you use, including the programs you're reading about. (Including Windows programs, I use the term _Windows_ to include both Windows Vista and Windows 7.) The most commonly used Windows programs, including some applications you use now, such as Microsoft Word and Internet Explorer, are installed with your computer on the hard drive (also called the _hard drive_ or _drive_). Other programs, such as the Microsoft Office applications and Adobe products, require additional software. **EXERCISE: PRACTICE SAVING IMAGES, PAGE 108** It's important to understand how saving your files works. You don't want to create new files or overwrite existing ones. Your approach to saving and storing files can have a significant effect on how your computer functions. You may sometimes forget that in a rush to click the Save button. In this exercise, practice saving images to your desktop. **TIP** Every piece of software you use should have a Read Me file that explains what it does and where the files are located on your computer. **1** Open the Computer window. **2** Go to your desktop and click the icon for the Windows icon. This window enables you to view the files you have saved to your desktop. **3** Click the icon for the folder icon. This shows the contents of the folder on your desktop,

What's New in the?

There is continuing effort in the microelectronics industry to reduce the size of microelectronic components. It is frequently desirable to use materials such as polysilicon, a silicon based alloy, or copper for use as a conductive line or interconnect. However, forming high quality conductors using polysilicon, silicon based alloys, and copper requires dielectric layers and additional processing steps. As a result, current microelectronic components are more expensive because they have more fabrication steps and cost more to manufacture. On the other hand, it is very desirable to be able to integrate larger and larger numbers of microelectronic components on a single substrate, such as a silicon substrate, because doing so typically reduces the manufacturing costs associated with incorporating microelectronic components into a device. For instance, the cost of packaging a microelectronic component in a device can be reduced if the number of microelectronic components on a single chip or die is increased. However, as is known to those skilled in the art, the cost of using larger and larger substrate sizes is the expense associated with handling and placing a larger and larger substrate with a lower yield in an appropriate shipping container, or chassis. This factor is often the major concern when designing the size and capacity of microelectronic components, such as microprocessors. A smaller substrate, therefore, would be able to accommodate a greater number of microelectronic components for a given capital investment, and a greater number of microelectronic components may be used to achieve a higher processing capacity at a lower cost. Thus, there is a need for a manufacturing process that reduces the number of processing steps while yielding greater microelectronic component densities. There is also a need for a microelectronic component having greater substrate surface area with a substantially planar surface. There is also a need for a lower cost method of assembling packaged microelectronic components. One embodiment, accordingly, provides a method of fabricating a microelectronic component having a diffusion barrier. The method includes forming a first layer of microelectronic structure on a substrate, and forming a second layer of microelectronic structure on the first layer of microelectronic structure. The method also includes forming an additional layer of microelectronic structure on the second layer of microelectronic structure, wherein the additional layer of microelectronic structure is formed in a monolayer. Another embodiment provides a microelectronic component having a diffusion barrier. The microelectronic component comprises a substrate and a layer of microelectronic structure formed
