In addition to the native programming environments, there are many free and commercial APIs for Java, most of which are used to build third-party AutoCAD-compatible applications. In 2016, the BIM Community Platform (BCP), an extension to the UDE, has been introduced. The interoperability of Java and AutoCAD has been supported since 2002 and since then many third party Java applications have been developed to communicate with the software, including complex modeling tools and bridge tools. C++ AutoCAD has a number of built-in APIs to use for automating tasks. The following sections describe some of the available interfaces. C++ The Windows and Linux versions of AutoCAD use a C++ API called Interface Design Environment (IDE) to provide access to most of the program's capabilities. The AutoCAD Windows SDK is available from Autodesk. AutoCAD LT uses a simplified C++ interface. The original AutoCAD had a subset of the AutoCAD API, the Autodesk Architectural Analysis and Design System (AADS), which is still available to licensees. Other APIs available in AutoCAD include: Visual LISP is an interface for interaction between AutoCAD and Visual LISP. AutoLISP DirectInput is an interface which allows interaction with the interface using keyboard commands. DirectDraw is a Direct3D interface. DirectX is a multimedia interface. Visual Studio.NET is an interface for interaction between AutoCAD and Visual Studio.NET. Visual Studio.NET Class Library is a C++ library used to access the API. Visual Studio.NET MFC is a framework that uses the .NET library. VBA allows for macro recording and automation of AutoCAD. The first version of AutoCAD used Autodesk's Class Library for

AutoCAD which was a subset of the API. When Autodesk made the Autodesk Architectural Analysis and Design System (AADS) it replaced the Class Library API with AADS, a Visual C++ interface, as a legacy API for AutoCAD. However, AADS was not made available for general use. .NET .NET is an a1d647c40b
