Improvements to the command line See what's new in AutoCAD 2023 in this video from AutodeskThe present invention relates to a novel photosensitive composition suitable for use in an automatic exposure, photographic exposure apparatus, image transfer and, particularly, graphic arts. The photosensitive composition of the present invention is useful for an image formation by the automatic exposure (or the phototopographic process) with a high efficiency in the graphic arts such as the exposing of the screen printing plate, proofing of the planographic printing plate, plate making for the planographic printing plate, etc. The photosensitive composition of the present invention may preferably be used as a photosensitive composition for the planographic printing plate. The photosensitive composition of the present invention has the advantages that the stability at the time of preparation, storage, etc., is excellent; it is very sensitive; and it can give images of high quality. Further, the photosensitive composition of the present invention can be applied by image transfer methods such as letterpress method, offset method, etc., to which is added a novel high-function plate and which method is suitable for digital printing and is widely employed for the plate making of planographic printing plate. Since the photosensitive composition of the present invention can give images with good surface smoothness, it is more suitable for the plate making of planographic printing plate. The photosensitive composition of the present invention can give images of high quality with the above advantage and a photosensitive composition for the image formation by the conventional plate making apparatus and which is suitable for the plate making of planographic printing plate is also obtained. Further, a photosensitive composition for the plate making of planographic printing plate which is suitable for the conventional plate making apparatus and which is capable of giving images with good surface smoothness is also obtained. The present invention further relates to a planographic printing plate material and a planographic printing method which have excellent suitability for the above-mentioned image formation and plate making.
