System Requirements: * Windows XP SP2 or later. * USB mouse (1.1 only). * USB flash drive with at least 32 MB of free space. * USB 2.0 interface * SuperI/O Kernel Driver. (At least for USB2.0). DMB USB Drive Manager Win98-ME USB Flash Drive Manager was originally designed for Windows 95 and 98. It gained popularity among users who found the current version quite limited. Compatibility issues had become an issue, since Windows XP was released. The application was poorly reviewed in some of the popular software portals and it was quite obvious that new versions were needed to meet the demands of the current user base. DMB USB Drive Manager was born and was able to significantly advance the usefulness of USB flash drives in general. Besides the already mentioned restrictions, the application had one annoying behavior which is why many users requested its replacement. Upon plugging a flash drive into a USB port, the application would launch itself the next time the USB port was used. It was, therefore, necessary to "Uninstall USB Flash Drive Manager" before trying to use another USB port on the same computer. DMB USB Drive Manager was designed to help you manage the data stored on USB flash drives,
