Have you ever been wanting to capture the conversation of others in a more stealthy way? Sound interesting? Well, using Skype's video/voice call technology, we came up with a clever way to do it. We'll show you how we used the Skype API to hack Skype's own botnet to show you how to do it, too. But, before we show you that, I'd like to tell you what a "botnet" is. Botnet is a term used for a network of computers that act like single machine. A botnet can be malicious, or it can be used by organizations to gain an advantage in the market, for example. Also, for example, the problem I am solving is a problem many ISPs and government agencies face in the last place they want to be caught with their hands in: spying. Using an old, known, and documented method of attack allows me to spy on a machine without it knowing I am spying on it. I make it seem as if the computer is infected with malware, 81e310abbf
