## Xecute Crack For Windows

Xecute is a cross-platform client that allows you to remotely control Windows 7/8/10/XP/Vista computers. It has a simple interface for the user and offers all the features you would expect. With a few clicks, you can use Xecute to connect to a remote computer, run commands on the remote computer or launch applications on the remote computer. Xecute provides the following: ● Cross-platform - Xecute can be used to connect any Windows operating system (desktop or server) remotely. ● Copy files to remote computer - Xecute includes an integrated file transfer client. It allows you to copy files, execute commands on remote computers or delete files, folders or any other file on the remote computer. ● Command execution - Xecute allows you to execute commands and scripts on remote computers, such as: ping, ipconfig, wmic, shutdown, shutdown -m, tasklist, icacls, net user, net groups, net localgroup administrators, etc. ● Remote applications - Xecute allows you to run an application or process on a remote computer. ● Secure access - Xecute provides multiple security options to establish an encrypted connection, which is suitable for secure remote access to computers. ● Database - Xecute provides a database (CSV format) with a list of available commands and a list of available commands on remote computers. ● Remote IP address detection - The computer IP address is displayed on the remote computer screen after connecting to the computer. This feature is useful to detect a computer IP address. ● Password encryption - You can use the following password encryption options: fixed, random or a combination of the two (fixed + random). ● Connection timeout - You can set a connection timeout between two computers to avoid false connections. ● Options - You can also change the following options: connection timeout, password, allow LAN access, window size, ping frequency, and more. ● Watch list - You can define a watch list for monitoring remote computers. ● Local notifications - You can set any notification to be displayed when new commands or files are executed on a remote computer. ● Time - You can set the time to display on remote computers and specify a time format. ● Auto-start - You can start Xecute automatically when the remote computer starts or shuts down. ● History and statistics - You can view the history of all executed commands and the statistics of the running processes. ● System repair
