Users are able to draw freehand or import 2D or 3D objects from other applications and save them in the native CAD format. The goal of the product is to simplify the design process by using digital tools, eliminating the need for drafting tape and paper and other traditional materials. AutoCAD is a drawing application, capable of generating and editing technical drawing files of all types, including 2D drawings and 3D construction drawings. Besides 2D, 3D models can be produced using 3D modeling and engineering tools. Within the app, there are several different ways to create drawing or geometric representations, and each of them has its own advantages and disadvantages. AutoCAD also provides some basic 3D printing support. There are two editions of AutoCAD: AutoCAD LT and AutoCAD Design Suite. The former is a free product intended for students and hobbyists, while the latter is the most expensive option, a \$599 per-seat license. AutoCAD LT provides basic drawing tools for 2D drafting while the more advanced AutoCAD Design Suite includes modeling and engineering tools and produces 3D drawings and models. AutoCAD LT is only available on personal computers, while AutoCAD Design Suite can be used on any Windows compatible computer, including tablet and mobile. Autodesk provides an OEM version for use with certain preconfigured hardware designed for specific industries and organizations, but it is only available for the Design Suite version of AutoCAD. Contents AutoCAD LT is the most basic CAD tool in AutoCAD. It was designed for the creation of simple technical drawings, mostly for professional use. It is not intended for more complex drafting, but it is the most widely used CAD application, with more than 100 million licenses sold by the end of 2017. It is free to try out, and there is a student version available, offering a 60-day trial. AutoCAD LT features a minimalist interface that is optimized for fast drawing speed, but it is not an ideal tool for advanced CAD applications. This is mainly due to the lack of advanced features and a restricted drawing area. The fact that it does not support advanced 3D features and tools is also something that can be a disadvantage. AutoCAD LT does not have 2D or 3D modeling tools, or advanced 3D capabilities such as boolean operations or reverse-engineering, so it is only useful to create simple technical drawings. It has a lot of basic

The name "AutoCAD" was later suggested by Larry Silver. The name was coined because the first version of AutoCAD was installed without an operating system on the computer. AutoCAD was originally written by Dennis Williams and Alan Suen in 1986. The software was originally a basic desktop-based computer aided drafting program with 2D and 3D capabilities. It was initially called DrawOne, until it was renamed AutoCAD, the initial letters of the first three letters of each word of the registered trademark Autodesk, the company that published AutoCAD. The first version of AutoCAD was released in 1987 as a graphical programming language called LPAL. In 1990 the first iteration of AutoCAD was released for the Macintosh. I have a form and when the user fills the form and hits submit, he gets a confirmation page saying that he has successfully tweeted. I want to store the tweet and user_id on a database. Can anyone help me? A: You can make use of twitter search API. This API returns data about any tweet. You can make a api call and check the response for whether it is successful or not. You can check more about twitter api at this link. Do take a look at how they have implemented their twitter search api. A: I'm not sure I understand your question correctly. You don't save anything to the database. When you submit the form, what you are doing is posting a tweet on twitter. So you should send a POST request to twitter api. Twitter API says: The search method on the REST API returns a list of Tweets matching the query you supply. As of version 1.1 the search method returns up to 50 Tweets per search. The request should look like this: In response you will get json objects like this: { "tweet_entities": [{ "type": "hashtag", "id_str": "1116280011", "text": "test" }], "created_at": "Sat Nov 30 22:53:42 +0000 2010", "id": "846608885486047488", "in_reply_to_screen_name": "testtesttest",
