Users may import objects from Autodesk 3D Studio Max, Adobe Photoshop, other programs, or even create their own. The user interface (UI) features an innovative 'rubber-band' drawing tool that makes it easier for beginners to draw, as it follows the edge of a selected object as you move it. AutoCAD also has many features for the advanced user such as use of tools and functions, graphical filters, and dimensioning. It is installed in over 30 different languages. AutoCAD has at least four main applications. Drafting (and hence also part of the total cost of ownership), and hence can be considered as the bulk of the cost of ownership of AutoCAD, as it contains most of the features used by CAD operators. The Drawing component of AutoCAD is a straightforward, general-purpose model-view-controller (MVC) tool where the model is a user's drawing on the paper, the view is the paper-space showing the drawing, and the controller is the software-space running the drawing. Users can take their drawings to a printer, to 3D graphics models, or to other applications such as AutoCAD LT. Drafting AutoCAD contains two applications, AutoCAD LT and AutoCAD. AutoCAD LT is a free software, i.e. not a subscription-based version of the application, that enables the use of the many features of AutoCAD, but is limited in functionality. AutoCAD is a full-featured CAD application that has been written in a modern object-oriented programming (OOP) language that is, in turn, built on the powerful programming language C++. AutoCAD runs on Windows, macOS, and Linux, and has long been an independent product. AutoCAD LT is part of the Autodesk Premium software package, part of the Autodesk Design & Creation Suite (which also includes the design application Autodesk AutoCAD Mechanical), part of the Autodesk design software family, or part of the Autodesk Autocad for Mac (ACAM) subscription. The Autodesk Design and Creation Suite also includes other applications such as Autodesk Revit, Autodesk Forge, Autodesk 3ds Max, Autodesk Alias Design, Autodesk Maya, Autodesk 3ds Max, and Autodesk Qaero. It's that time again! For the second year in a row, Pigeonholes Publishing is launching a new season of their long-running "Not Your Parents' Travel Tips" column. This year's theme is "South by Southwest." Our friends at Pigeonholes' editor and fellow motorcyclist-writer Bob Smith decided it would be a great way to kick off our September issue. Bob says, "Each year, we're lucky to meet such an amazing array of interesting and fun people at this highly successful conference." South by Southwest, or SXSW, is a gathering of creative industry insiders, and Pigeonholes is a great way to keep up with all the happenings at the annual conference in Austin, Texas. For those of you who haven't been, it's a chance to spend a couple of days networking with the best minds in the world in music, film, and the digital arts. Pigeonholes readers will recognize this year's theme from last year's edition. (If you haven't read the "not your parents' travel tips" column in Pigeonholes before, you can read about how to do it from last year's issue [here](#).) Bob wrote about the great travel accommodations at the 2013 SXSW, including a tip on how to stay near the convention. In this year's edition of "Not Your Parents' Travel Tips," Bob will help readers plan their own SXSW adventure and keep them away from the kind of mistakes he made when he was starting out. In last year's column, Bob shared a tip about street riding and a love letter to an old friend, while this year he tackles a trip he took last year to SXSW to surprise his wife. Bob will answer a few of the most common questions asked by Pigeonholes readers on a regular basis and share what he learned as a first-time SXSW attendee in a column of his own. He's also going to do an "Ask Bob" feature on an issue or topic. The previous "Not Your Parents' Travel Tips" column is currently featured in our July/August issue. For the full "Not Your Parents' Travel Tips" archive, readers can find all the past
