countries. AutoCAD can be used to produce drawings and assemblies of architectural, mechanical and electrical systems; 2D and 3D drawings; engineering analyses and calculations; working drawings; electrical schematics; assembly drawings; and a range of visual communications and surface modelling applications. It is also used by many other industries. AutoCAD offers both manual and automated drawing capabilities. AutoCAD has its own drawing canvas which is not restricted to paper size, although it is restricted by the paper feed tray size and resolution of the printer. AutoCAD can produce plots of data for a range of two-dimensional and three-dimensional (3D) plotting formats including isometric, orthographic, and oblique views. AutoCAD is an accurate and versatile design tool. It includes advanced functions for working with the latest generation of geometry and digital media. More than 100 languages are available including Arabic, Chinese (Simplified and Traditional), French, German, Greek, Italian, Japanese, Korean, Polish, Portuguese, Russian, Spanish and Turkish. Shahar Badie, a 19-year-old member of the White Helmets, who worked in the south of Syria, has revealed that during the first aid sessions they always ask people about their religious beliefs and practices. "We ask people whether they are Muslim, Christian, or any other religion," Badie told Fox News. "Then we ask them, 'How do you pray?' and 'What do you do in your prayer?' All this information helps us in understanding their culture and religious beliefs," he added. Badie said this is especially important when dealing with children, as the first aid workers are careful not to hurt the children's feelings by dressing the children differently. Badie also said that the groups have had a good relationship with local villagers, many of whom have invited them into their homes. "Villagers are very welcoming. We're here to help them and we're living in their houses," he added. The White Helmets are an NGO, or nongovernmental organization, founded in 2013 in Aleppo to "save lives and document civilian deaths in Syria's ongoing conflict", according to their website. editing Now you can edit and copy edit paths just like text with Insert key (Shift + I). The new Quick Fit tool, which identifies parallel, perpendicular and common angles, reduces the need to draw, snap and trace. Automatic selection of the best fit is now available in plot selection. Navigate features now display more of the information you need with the viewport now showing more information in the Information Bar. Design history now displays selected drawings, making it easier to find the drawing you want to edit. Drawing and sizing tools can now be selected in the status bar. The Ribbon now offers an easier to read, more accurate hierarchy. Word-processing features are now available on the Ribbon. Apply guides now extends to the three axis of the current working plane. Text styles can now be applied to groups, paths and surface objects, as well as to controls. The ability to use transparent elements in drawing views. Improved performance with the Layer Manager. The ability to move nodes through groups. Design Check: The Design Check tool has been updated with new performance enhancements and additional controls to help you better maintain your model. The tool is now fully responsive, which means the design check button always appears in the toolbox. The new version of Design Check uses the same dialog box layout as the Ribbon, so the toolbox view shows design check while the Ribbon view shows drawing. With the design check view selected, the Add/Move/Delete buttons are removed from the dialog box, so you can more easily see all of your design check options. Your design check options include the ability to see your design check drawings in the process in reverse order. The design check can be applied to individual nodes, groups or everything. If you don't want Design Check applied to a design check drawing, you can toggle design check off before starting the design check. You can now select the view types that will be available for design check, based on the current view type that is active in the drawing. There are also new Design Check buttons on the Status bar and the Quick Access toolbar that provide direct access to Design Check: Design check now applies to the selected paths, surfaces, layers, nodes and groups.
