What is AutoCAD? AutoCAD is a computer-aided design and drafting software application that creates, edits, and analyzes two and three dimensional (2D and 3D) drawings, schematics, and design data. The application also allows users to construct and animate custom drawings from a library of geometry and symbology, import images, create text files, build schematics, and perform many other technical functions. Is AutoCAD a CAD program? No, AutoCAD is not a CAD program. AutoCAD is a 2D/3D drafting and design application. Its name was changed from Microstation to AutoCAD in late 1999 to better align the product with other Autodesk software products, such as AutoCAD Architect, AutoCAD Mechanical, AutoCAD Electrical, AutoCAD Civil, and AutoCAD Electrical Drafting. Is AutoCAD a vector graphics program? No, AutoCAD is not a vector graphics program. While AutoCAD and all other Autodesk CAD applications are 2D vector programs, they cannot be used to import or export vector graphics from other CAD programs. The following vector CAD applications can be used to import and export vector graphics into AutoCAD: Autodesk® Inventor, Autodesk® Design Review, Autodesk® Fusion 360, Autodesk® Print, and Autodesk® Fuse. Are the tools in AutoCAD similar to the tools in CAD programs? No, AutoCAD tools are not similar to the tools in CAD programs. AutoCAD does not use layer-based drafting. Instead, all objects in AutoCAD are either fixed to the layer or can be translated independently from the layer. AutoCAD also offers the ability to zoom, pan, and rotate the viewport. How do I use one-click snap to plan/size objects? One-click snap is the ability to "snap" (alignment) one object to another object. For example, if you click a circle on the screen, it snaps automatically to the center of a rectangular block. To align objects, you can click on one object and drag the cursor over the other objects you want to align. The closer the cursor gets to the other object, the closer the objects will be snapped. You can also specify that you want to snap to a specific point on the object
