---

## Network Asset Manager

Network Asset Manager is designed to be a Hardware and Software inventory management program. It uses a clean and simple interface that allows the user to quickly find anything on his computer. Its purpose is to monitor the hardware and software items of a computer(s) and report on them. It supports all major operating systems such as Windows XP, Vista, and Windows 2000/2003/2008 Server. It requires Java Runtime Environment to function correctly. It may work perfectly with Java 3D, but check the Java Requirements web site for further information about Java 3D. It can generate reports that include hardware and software inventory information, maintain inventories and catalogs, perform searches and groupings on hardware and software items, export reports to Excel or CSV format, print reports or save as PDF, and so on. Network Asset Manager has been designed to be a powerful tool. It was developed to meet the needs of Systems Administration, Systems Technicians, etc. We are continuously adding to the functionality of Network Asset Manager to enhance its usefulness. If you like the program, then please support us and download our full version. By downloading the program you will be supporting us and helping us to improve Network Asset Manager. The program is available for download at: [www.NetworkAssetManager.com](http://www.NetworkAssetManager.com) Network Asset Manager Installation Method: You can download the program using your Internet Download Manager. After you have downloaded the program, follow the instruction manual in the program folder for installation of the program. Before installing the program, you need to know a few things: Network Asset Manager is a Java program and therefore it needs a Java Runtime Environment. Your computer has a Microsoft Windows operating system. You should check with your Internet Service Provider if they have a valid subscription agreement for their service. Network Asset Manager can require Java 3D. So check the instructions for Java 3D for how to install Java 3D. More detailed installation instructions are provided with the program. Network Asset Manager Restriction: Network Asset Manager is a true open source program and contains no form of DRM or copy protection. All the information collected from your computer(s) is analyzed and used in the report for you only. Technical assistance will be provided in the program forum. Network Asset Manager Credits: The primary source for the program is the free coding of Internet Inventor for the project "Inventor - A Fast and Flexible solution for Trademark Search and Protection". This project

### What's New in the?

Network Asset Manager is a remote monitoring and inspection tool. It allows for real-time inspection of all hardware and software components (including operating systems) on the network and generates reports on the system configuration. You can also run the application on a host computer and be able to remote view it. Network Asset Manager collects information about the system configuration and logs it in the application database. Network Asset Manager can monitor all Windows OS and Linux systems remotely. The application uses data compression and encryption to allow for safe storage of sensitive information and to protect from unauthorized access. Network Asset Manager includes built-in hardware and software inventory tools. You can make hardware and software inventory of your computers for a faster and easier installation process. Add, update, edit or delete items on the inventory database. View item details, including description, value, installed location, publisher, description, update date and size. You can restrict access to the inventory database. Network Asset Manager provides detailed details about the system configuration. View detailed information about the currently installed software (name, publisher, version, install date and size). View detailed information about the hardware (CPU model, installed RAM, system memory, etc). View information about all ports installed on the host (serial, parallel, network, etc). Detailed information about any installed software, hardware or network device is also available. Report software inventory by the software name, publisher, version and update date. Report hardware inventory by the make/model, manufacturer, version, installed RAM and serial number. Network Asset Manager allows you to see software and hardware inventory on remote computers. You can also monitor and control software inventory on remote computers. You can open the inventory database from the Network Asset Manager application. And you can open the inventory database on any host computer. You can use the Inventory Manager tool to view and edit the inventory database. You can read, edit and delete items from the inventory database. You can add new items to the inventory database. You can also set inventory values. Network Asset Manager allows you to manage the inventory database remotely. The database in the application can be exported to text format. Network Asset Manager supports inventory of Windows and Linux systems. Running the application on any host computer results in remote visual inspection of the system configuration. Application Features Report System Configuration Generate detailed reports about the system configuration, hardware and software inventory. View information about all items installed on the system
