The Brief History of Photoshop Photoshop was developed by two artists, John Knoll and Thomas Knoll. The two came together to conceive the concept and design Photoshop. John Knoll was the creative director of the Macintosh division of Adobe Systems, and Thomas Knoll worked as an artist before co-founding the company with John Knoll in 1982. John Knoll wanted to create a new tool for artists. It would combine painting techniques with computing—allowing them to create designs quickly using precise digital tools. In Photoshop, he used the VisiOn 3D visualization environment to develop the concept. Adobe Systems Incorporated The first version of Photoshop was launched in 1987 with few features and only a handful of adjustments. It was first released for the Macintosh in the US on July 15, 1987, and was designed to replace CorelDraw. Adobe Systems Incorporated Over the years, Photoshop expanded its functionality. Adobe Systems Incorporated In addition to being able to work with raster and vector images, which is the best way to edit most images, Photoshop was developed to support photographs, drawings, and traditional art. Users can quickly apply various types of filters and effects for both photographs and vector images. One of the most useful features of Photoshop is that it simplifies retouching. Adobe Systems Incorporated In 1991, Photoshop 2.0 was released with many new features including the ability to edit and retouch multiple layers, and to import and export still and video images. Adobe Systems Incorporated Photoshop was first launched for Windows in 1992. Adobe Systems Incorporated In 1994, Photoshop 2.5 was released with more editing tools, real-time video, and the integration of Macintosh and Windows platforms. Adobe Systems Incorporated Photoshop 3.0 was launched in 1996 and was the first version to be completely re-engineered with a new user interface. New features included the ability to convert or import between editable and non-editable formats, and a new editing engine. The software was released for Windows, Macintosh, and UNIX operating systems. Adobe Systems Incorporated Photoshop 2.5.1 was released in 1998 with new features including improved image blending, light tools

Biomarker-enhanced intervention for cold-inducible RNA binding protein (CIRBP) to alleviate gestational hypoxic stress in the hypertensive mouse model. Cold-inducible RNA binding protein (CIRBP) is a modulator of the cell cycle, which is involved in hypertension. This study investigated the role of CIRBP in the pathogenesis of gestational hypertension and offered a new approach using a CIRBP-specific peptide to treat it. Pregnant mice were assigned to a normotensive or gestational hypertension group and received either saline or a CIRBP-specific peptide. The CIRBP-specific peptide upregulated CIRBP expression in treated hypertensive dams and significantly alleviated the blood pressure, phenylephrine (PE)-induced contractions in the uterus and PE-induced changes in prostaglandin E2 (PGE2), nitric oxide (NO) and interleukin-1 (IL-1) expression in the uterus. Treatments with the CIRBP-specific peptide and PE decreased CIRBP expression and increased the proliferation of human umbilical vein endothelial cells (HUVECs). These results suggest that CIRBP may be involved in the pathogenesis of gestational hypertension and the CIRBP-specific peptide treatment may be useful in regulating gestational hypertension. Image copyright Getty Images In the last few days, Donald Trump has been roundly criticised for his inflammatory comments about a judge of Mexican heritage. On Tuesday, his critics continued to call for him to abandon his candidacy, perhaps even for treason. Later, the presumptive Republican nominee engaged in a Twitter spat with women's rights activist Carly Fiorina. It was no surprise that an ongoing racism row had derailed the presidential campaign of Mr Trump, whose former co-prez, Mitt Romney, has called him a "con man" and "the worst candidate for president we have ever had". But this is no longer a thing that can be whispered. And yet, in the four-month-long summer of "Crooked Hillary", Mr Trump has dominated the media discourse. More than any other candidate, it seems, he loves the attention and enjoys provoking his detractors. Hardly anyone in political journalism has proved immune to his trend of provocation, and, so long as it appears to be about somebody else rather than himself, Donald Trump appears to have become immune from criticism in his

Q: Clear like button Hi, i have a lot of posts on my page and i want a button, when the user clicks on it, it clears all the text on the page, just like a clear button does, i tried using the clear function but it clears everything. A: Use the nop - a clearing button :) \$(document).ready(function() { \$('#clear').on('click', function() { \$('#yourDiv').html(""); \$('#yourDiv').show(); }); }); See it here in action: Q: SetAxisColor function in tableView returns error msg code -32000 I use the UITableView, and I want a color set (setAxisColor) for the table. I succeeded setting the index, but when I want to set the color, I got: -[UIView setAxisColor:]; unrecognized selector sent to instance 0x2063e200 I followed the official documents and found the UITableViewDelegate : UITableViewDelegate protocol and called the function in the UITableViewDataSource, - (NSArray *)tableView:(UITableView *)tableView I have no idea about how to solve it. Edited: After @matt's comment, this is my code. Please see the comment below override func viewDidLoad() { tableView.reloadData() // setting up mytableView and data mytableView = UITableView(frame:zero, style: UITableViewStyle.Plain) mytableView.dataSource = self mytableView.delegate = self // unselected state var selectedColor = UIColor.whiteColor() var unselectedColor = UIColor(red: 255/255,
