Program for giving remote applications updates. R: Wget FTP Sockspy R: Python 2.4 and 2.5 R: Python 2.6 and 2.7 R: Python 3.1 and 3.2 R: Python 3.3 and 3.4 The Wget FTP Sockspy application will download a list of files from a remote host via the web, then wait for an incoming request to perform the actual download. The selected files will be saved to a local directory, and in turn, the user's Web browser will be made to request them. This is extremely useful if you have software that is not designed to download over FTP (like Internet Explorer, Netscape, etc.). WyBuild improves on the Wget FTP Sockspy application by allowing you to upload your own custom wyBuild archive that will be used to execute your custom "scripts" once installed by the users. WyBuild is free to use and its popularity is growing, many happy users can be found at Verdict: I love the ability to save so many files and have them auto-installed on Windows machines.
