OST Rating: 5/5. Seafarer Evaluation Training System Sets Plus.rar Q: iText7 - Strong type I have some strong types for my fields, for example, when the user inserts a string in a rich text field, I have: [0] when, in the pdf, I print the field name, the name is printed like: fieldName I need the id to be printed like: fieldID with the id assigned in the.html page. Is there any way to do this? Thanks. A: When you're creating a DOM document for PDF/A output, you should be using a namespace. I.e. you would have a PdfDictionary.put(String key, String value) and PdfDictionary.put(String ns, PdfObject object). Your issue is that you're not using a namespace. Without a namespace there is no way to find fieldNames
