The application-level, modular, cross-platform software component. A robust gateway proxy for HTTP, FTP, NNTP and SMTP protocol. A powerful DNS resolver. A parsing engine. An SSL decoder and coder with its own configuration language. Features SSH and Telnet support. Flexible authentication support (PAM and Kerberos). SockJs and WebSockets support. Multi-platform. DeleGate tutorials are available at DeleGate project page on GitHub is available at Documentation available at Book (PDF) about DeleGate available at The following example shows DeleGate connected to two endpoints. DeleGate resolves the host and redirects the HTTP request to on the backend DeleGate uses Cloudflare to determine that the backend host is secure, so it returns a 502 bad gateway error instead of a 401 UNAUTHORIZED response. Command run on start: DeleGate inbound server has been started (TCP port 443) DeleGate inbound server started Listening on any TCP port (TCP port 443) Command run on stop: DeleGate inbound server has been stopped DeleGate inbound server stopped DeleGate inbound server connected to UDP port 12345 (TCP port 443) DeleGate inbound server connected to UDP port 12345 (TCP port 443) DeleGate inbound server connected to TCP port 8000 (TCP port 443) DeleGate inbound server connected to TCP port 8000 (TCP port 443) ... What's New In?

The Deutsche Forschungszentrum für Luft und Raumfahrt (DLR) is the German space research and space technology organisation. Its acronym is DLR. DeleGate was born as a tiny proxy for Gopher in March 1994, but later the Gopher protocol was abandoned. DeleGate is developed for no profit by volunteers. News from the Department February 1, 2011 U.S. Sen. Thomas Carper's (D-Del.) proposal to raise U.S. gasoline prices to hedge against market turmoil is in danger of being undermined by the oil industry. Senate Majority Leader Harry Reid (D-Nev.) has pushed back against the proposal, which would raise the price of a gallon of unleaded gasoline in the U.S. to an average of \$3.40 by July, according to a report by Bloomberg. The Democratic senator's office said the senator is working closely with industry officials to address their concerns and to ensure the issue is not watered down. "We're very supportive of it, and it's one of those things where we're working with the oil industry on trying to figure out a good number that is somewhat reasonable," spokeswoman Katie Prill said in a statement. Carper's proposal would end a decade-long decline in the price of gasoline and would help consumers and industries affected by the current economic crisis, the senator said in a news release. The price of a gallon of U.S. gasoline was an average of \$2.75 per gallon as recently as April 2008, but has fallen about 4.5 percent since then, according to data compiled by The Associated Press. Gasoline prices typically increase as the price of crude oil rises, although they've fallen lately as crude prices have declined. A source close to the negotiations, however, said the senator's proposal has yet to be included in the negotiation process. The source said the source added that his federal contacts for the oil industry were not convinced by the senator's proposal to mitigate the economic damage. "What is striking is that the oil industry would prefer a price increase." the source said. "Their whole argument is that they could offset part of the price increase by making their own oil more expensive. A

recent oil executive said that, if that happened, it could take prices back to \$5 a gallon." The source said the senator's proposal would reduce the benefits of the

System Requirements:

Operating System: Windows 10, 8.1, 8, 7, Vista, 2003, XP with Service Pack 3 (32-bit) or later Mac OS X (v10.5.8+), Mac OS X (v10.6+), or Mac OS X (v10.7+) Minimum 2 GB of RAM (1 GB will also be fine for an occasional trial run) GPU: NVIDIA Graphics Processing Unit. Most are compatible but AMD, especially the cards newer than the HD2000 series, are often incompatible.
