I have a distant relation in my family who's dad wrote this on a box of milk when I was 4. I remember finding that box of milk and wondering where the stories went. I found the box of milk to have stories, and I remember reading those stories because they were so real. Alice Madness Returns is the first game I've played in years that I can really play with others. I used to like adventure games in my youth,

I would play them until my mom or dad would have to tell me to stop because they'd be in bed sleeping. So that meant my parents were right. Not anymore. The game is great, every Friday I try to watch a girl play, and she plays well. I'm finding myself not using my mouse or keyboard during her sessions. The game is pretty hard, but it makes up for it with a beauty so endearing. Anyone who enjoys a good graphic adventure game should go pick this one up. I've never been much of a casual gamer. I love games that are deep and difficult, however I remember playing Alice Madness Returns and thinking to myself that if my family knew I played a video game that was so good, they would hate me. I got in big trouble for playing MMORPGs at the table when I was home for holidays, so I've been keeping this secret out of respect for them. Anyway, I just wanted to give a massive thank you to the dev team that has gone through such an incredible amount of trouble to make this game what it is. I

had such a great time playing this game, and I hope my family doesn't give me a hard time about this!Q: Unit test not included in final release I have developed an Android app, and I use SQLite for my DB. For one part, I add some database records in the constructor of the Application class. These records are shown in the main activity, on "onCreate()". @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_main); if (savedInstanceState == null) { getSupportFragmentManager().beginTransaction().add(R.id.container, new PlaceholderFragment()).commit();

I tried to do it with regular expression that I know how to use, like this: ('.+\\r (|\$)') I tried a lot of online testers with it, but the result was always like this: I only need the text inside the parenthesis! A: I'm not sure what the result you are getting is. This is what I see: What I want is to scrap the original and put my desired text in the desired position. I tried to do it with regular expression that I know how to use, like this: ('.+\\r (|\$)') I tried a lot of online testers with it, but the result was always like this: I only need the text inside the parenthesis! Are you trying to just get the text between the parenthesis? I'm not seeing that in your code. I see this line: match = re.search('.*Skidrow Rar.* [\\r \\t]?*Kernel Cracked ', text) By the way, you're putting the parenthesis within the middle and then escaping them. It should be: match = re.search('.*Skidrow Rar [\\r \\t]?*Kernel Cracked ', text) Let me know if this helps. EDIT: I think I see your problem. Your file is not the same as what you're putting into your test program. First, this line: newfile = open e79caf774b
