Basic workflow tools AutoCAD 2009 introduced a unique feature called Direct Link. This allows the user to open other drawings as a new drawing that works in much the same way as if they were created from scratch using the NEW command. The feature was later enhanced with Direct Link 2010. Users can also link drawings with other programs such as Microsoft Word, Microsoft Excel, Adobe InDesign, Adobe Illustrator and other Microsoft Office programs. Extended view mode is an extension of the basic view mode. This allows you to zoom in or out, turn on and off side display, change the text size and color, apply textures, or view the work plane. The extended view is disabled by default, but can be enabled in the Preferences and Properties dialogs. Once activated, click on the grid (north/south/east/west) icon on the status bar. Visible templates are visible in the application database. These can be used for customizing the application. They are located in the "My templates" folder. A number of temporary files are created when drawing views are created and saved. Templates allow users to configure each of these files so they can be reused in future drawings. In AutoCAD 2010, the application database is based on object-oriented programming language that could integrate with other languages, such as Visual Basic for Applications, C#, Java, C++, or any other. A number of AutoCAD command-line options are documented in the Autodesk Command Guide. Starting with AutoCAD 2016, CAD and DWG files can be merged using the Merge Files command. In AutoCAD 2018, the command to connect two DWG documents is called Merge To This and is available on the command line, and the Merge To This dialogue box, or command-line merge, supports importing to the current drawing.
