AutoCAD is also used by artists, model makers, animators, illustrators, machinists, and other technical workers for both architectural and engineering purposes. AutoCAD is used in many other fields such as scientific/medical and educational. It is used in the production of architectural models and construction drawings. Engineers use AutoCAD for creating engineering drawings, architectural models, and architectural drawing production. AutoCAD is also used in creating technical drawings, drawings, and documents. In general, the work of architects, engineers, and draftsmen requires the use of tools such as AutoCAD that are more suited to drafting and modeling as compared to their previous work of hand drawing. AutoCAD is also used as a starting point in a broad range of computer-aided design and computer-aided manufacturing (CAM) systems, like CNC (Computer Numerical Control) milling machines, CNC routers, and CAM software for laser and waterjet cutting. More sophisticated software is also used as a starting point in a range of other computer-aided design and computer-aided manufacturing systems, including computer-aided manufacturing systems, CNC routers, three-dimensional printers, mills, and industrial robots. The potential exists for using more than one computer-aided design and drafting system simultaneously (multi-
