An inquiry revealed that between 1993 and 2007 the total value of car crashes in the United States was $165 billion. This was more than four times as much as the value of all motor vehicle thefts. Big-ticket cars were at the centre of the crash business. The annual cost of repairing one has jumped from $2500 in 1983 to $10000 now. Many have not been repaired. Mr Ben Kiely of the Federal Motor Vehicle Safety Standards Administration told a Congressional committee that about 12% of all new vehicles are worth less than their original cost of manufacture. It is hard to get precise numbers about how many vehicles are out on the road, but estimates suggest that there are 100m or so, and an industry spokesman says there are 170m vehicles in the United States. That is a lot of machines clattering about, and a lot of spare parts flying around. What Mr Kiely's office is proposing is a database of all cars in America. Every American motorist would then be forced to register his vehicle and produce a bill of sale. The information would be kept in a database, which could be searched electronically, to provide crash statistics. The bill is supported by the insurance industry. This is not because they are concerned about safety, but because they fear that it could cut into the profits of their competitors. The opposition party is crowing that it will be hard for the industry to oppose the plan, since it is voluntary.Serum antibodies to the polymerase cofactor PC4 in systemic lupus erythematosus. The serum autoantibody to the immunophilin protein cofactor PC4 (p48) (also known as cyclophilin B) was measured by enzyme-linked immunosorbent assay in 66 normal control subjects and 72 systemic lupus erythematosus (SLE) patients of diverse disease activity. In patients with active SLE, the level of antibodies to PC4 was elevated above the

MasterCAD Ultimate 2020: MasterCAD Ultimate 2020 includes the following new tools: – See new ways of viewing data through the 3D model, interactive dashboard, image base reference, data browser, and advanced layers and properties, with auto-updating visualizations. – Quickly see how your drawings compare with your model and change settings. The comparison is based on the proximity and degree of fit between the model and the drawing. – Simulate your model with unlimited precision, along with the ability to preview the simulation using the light pen tool. The ability to simulate and view the results of your changes takes a new approach to user interface by enabling you to view the simulation results within your drawing and modify settings as needed. – Introduce new ways of creating your drawings by allowing multiple objects within a single drawing. – Replace the workflow of drawing on the fly and change a drawing at a later time. Snap to features and easily draw on top of existing drawings. – Create models by connecting to APIs to source data from outside applications, such as Excel and MATLAB®. – Enhance the power of templates to make faster more efficient design that's reusable and automated. – Add true 3D support in AutoCAD drawings, including new drawing features and an updated user interface. Create 3D models and view them in 2D, 3D and immersive mode. – Take advantage of the new assembly feature in Rhino and Meshmixer. – Insert and edit geometry faster with the new select tool, and with all tool settings automatically updated and saved for easy recall. – Import and edit inplace DWG files. – Graphically simplify your design with the new sketching capabilities that give you the flexibility to edit
