AutoCAD is a successor to the earlier AutoCAD LT (or AutoCAD Drafting System), released in September 1982 as a compact alternative to AutoCAD's desktop version. With AutoCAD LT, the user could connect to a mainframe (or minicomputer) running CAD and work on graphic overlays on those mainframe-based designs. With AutoCAD, the user could connect to a mainframe (or minicomputer) running CAD and work on graphic overlays on AutoCAD graphics. While AutoCAD LT offered a 64K of local storage to store drawing files, the desktop version of AutoCAD allowed for up to 1 megabyte of storage. Starting in 2004, Autodesk introduced an updated version of AutoCAD, AutoCAD LT 2009. AutoCAD LT 2009 included a number of new features, including the ability to publish online, allowing users to share their creations and collaborate. By 2009, Autodesk also began offering AutoCAD LT as a web application, which can be accessed from mobile devices such as smartphones, tablets, and laptop computers. Also beginning in 2004, Autodesk released AutoCAD 2004 for personal computers. Released in September 2004, AutoCAD 2004 was a 64-bit version of AutoCAD LT 2009. AutoCAD 2004 retained the ability to connect to mainframe or other CAD systems, unlike the previous versions of AutoCAD that could only connect to one CAD system at a time. AutoCAD, its predecessor AutoCAD LT, and AutoCAD 2004 were used to create many of the products featured in the Sci-Fi Channel's original production of Blade Runner. Autodesk claims that it was used to build a full-scale replica of the Tyrell Corporation's headquarters at 4960 Rivington Street. In 2012, Autodesk introduced a new version of AutoCAD, AutoCAD LT 2012, which supports 64-bit computing and can be accessed through a web application. This web application can be accessed from mobile devices such as smartphones, tablets, and laptop computers. AutoCAD LT 2012 also includes some new features such as integrated cloud storage and a new mobile app. The AutoCAD program has been one of the most popular programs for many years, serving as a replacement for many early versions of CAD programs such as the HP suite. AutoCAD and AutoCAD LT, however, are still the predominant desktop applications in

Tags:The present invention relates generally to the field of filtration, and more particularly to a modular filtration device. In the process control industry, there are numerous types of filtration and treatment devices used to remove contaminants from fluids. These fluids include: liquids, gases, and slurries. Many of the various types of filtration devices include one or more porous elements or "bags." These bags are often cylindrical in shape and are typically formed of molded synthetic resin materials. The bags are coupled to a manifold or other conduit or chamber that directs the fluid to be filtered through the bags. As the fluid is directed through the bags, the contaminants are trapped on the surfaces of the bags as the fluid passes therethrough. Often the bags are connected to the manifold or other conduit or chamber in a side-by-side relationship and the resulting assembly is often referred to as a "bag house." The number of bags used in a filtration system can vary, and is often determined by the flow rate and the volume of fluid to be filtered. The choice of bags used in a bag house depends upon the physical characteristics of the bags. For example, there are various types of synthetic resin bags which have various physical and chemical characteristics. Also, there are bags having
