Overview AutoCAD is a full-featured 2D CAD application. It can be used to create and edit 2D drawings, including 2D parts lists, schedules, Gantt charts, and a variety of other types of drawings. You can import, cut, copy, edit, align, and annotate 2D and 3D drawings and components; create, edit, and view 2D and 3D drawings and models; create, edit, and manage AutoLISP source code; and synchronize CAD drawings with external data (such as Microsoft Word documents) and online data sources. AutoCAD has a robust engineering modeling capability. Its features include 3D modeling, BIM, measurement tools, 2D and 3D annotation, and drafting. AutoCAD is also used to create architectural, land-use, and construction drawings, shop drawings, blueprints, and any other type of drawing. In addition to 2D and 3D graphics, AutoCAD includes a variety of file and data management capabilities and an embedded raster image-editing program. History and development AutoCAD was originally developed by Hayden Software, a division of Autodesk. The first release of AutoCAD was in December 1982. AutoCAD was named after founder John D. Ritzenthaler, the AutoCAD Program Manager at the time. The original AutoCAD was originally only available for the Apple II computer and for the Tandy Corporation's TOPS-10 computer. AutoCAD 7 in 1986 In 1988, Autodesk introduced AutoCAD R14 for the IBM PC (also known as the XT) and MS-DOS, which was the first version of AutoCAD to be commercially available for personal computers. It is this version that has been primarily available since then. AutoCAD extended the capabilities of CAD drawing programs beyond just creating 2D drawings by adding 3D modeling, features that became more common in the next few years. In addition, the 4th version, released in 1993, brought a simplified user interface and new color-coded axes (where a pair of lines represented a value range). AutoCAD 7 in 1993 had a more modern look and a different toolbar. AutoCAD 9 in 1995 AutoCAD 9 was the first version of AutoCAD to be sold as a complete, full-featured CAD package, and

AutoCAD Training Center (Web-based, Offline) provides comprehensive instructional materials for CAD students and professionals. The learning system includes videos, animation, text, animation, and animations, an instructor manual, course exam and a user manual. AutoCAD Online allows users to study from anywhere with access to the internet, with features such as high resolution drawing on-screen. AutoCAD Online lessons are split into three levels based on student skill level and individual needs. Each lesson contains tasks for the user to complete before moving on to the next. The three levels of AutoCAD Online are: Starter (beginner) Intermediate (intermediate) Expert (advanced). AutoCAD 2013: New features, tools, and automation tools have been introduced in AutoCAD 2013 including the ability to create parametric surfaces, parametric views, and switch planes on the fly. These tools are now integrated into the drawing environment. Autodesk 360 Cloud Platform allows sharing of software, information, and services. It is a web based platform accessible on a variety of web browsers including Windows, iOS, Android and Chrome OS. AutoCAD is available on the platform in the form of cloud-based applications which allow users to view, edit, and annotate AutoCAD files on mobile devices. Files can also be uploaded or downloaded from AutoCAD Cloud Application using the mobile apps or the web browser. AutoCAD also supports connectivity through the use of AutoCAD Connect, a software-based connectivity platform. Autodesk's Connect API enables AutoCAD and AutoCAD LT users to connect with one another or to third party applications to exchange drawing data, collaborate on work, or to visualize and analyze data. Open Source In October 2011, CodeWeavers released a version of the Wine project that supports AutoCAD LT and AutoCAD 2008 or newer, AutoCAD 2010 and newer. In August 2016, CodeWeavers released their own fork of the Wine project, which is called the CodeWeavers Wine Team fork, and supports AutoCAD LT and AutoCAD 2014 or newer, AutoCAD 2010 and newer, and AutoCAD 2008 or newer. In May 2018, Microsoft announced the addition of the AutoCAD 2015 Runtime to Windows 10. The runtime is built on top of the Mono and Roslyn development tool chains. I'm making requests to a Google Maps API to get markers and info windows for the pins I have stored in a Google Map. I've got a PHP function to load all the markers and info windows into an array, but it seems like the only thing I can do with the array is add markers and info windows to the map at a given time. The issue is that if I'm just adding a single marker, the request for the info window is always made when the page loads, which causes the popup to open. Is there a way to add markers and info windows without making so many requests? A: You can attach a single handler function to the map. Here's an example:

```
function initialize() { var map = new google.maps.Map(document.getElementById('map'), { center: new google.maps.LatLng(-23.57375, -46.86119), zoom: 14 }); var markers = []; for (i = 0; i
