## DataExplorer Crack For PC

# [Download](#)

### DataExplorer Download [Win/Mac]

DataExplorer is a professional software application designed specifically for helping you collect, analyze and view information from devices with a serial port or other CSV-like or USB port. It works with data loggers, measurement and charging devices, or other similar ones in order to gather measurement data, present it graphically, and generate comprehensive statistics. User interface The tool adopts a multi-tabbed layout where various pieces of information are placed at your fingertips, such as graphs, statistics, tables, file comments and object characteristics. At the bottom of the main window you can check out the serial communication status, like connected, receiving and transmitting, progress of long operations, as well as warning messages or measurement results. History, importing and exporting options DataExplorer reveals a list a list with the last used fields (maximum 10 entries), and lets you import/export data from/to CSV file format with absolute or raw details, as well as print the information. GPS data can be exported to KMLZ file format and launched with Google Earth. Working with graph data and devices The tool gives you the possibility to zoom in or out of the generated graph, copy the graph to the clipboard, apply various graphics templates according to the device and channel configuration, and hide or show graphics header and data set comment. Statistics and other collected pieces of information DataExplorer is able to provide statistics about the measurement data (e.g. voltage, current, power, energy, velocity), unit, minimum and average info, and standard deviation. Tables record information about the time, voltage, power, and energy. Digital and analog view modes, cell voltage and curve parameters You can check out the digital view mode that reveals the actual measurement

---

values while data is being captured or switch to the analog view with active measurements. The cell voltage recording parameters can be applied for the Lithium battery cells charger. The voltage values are revealed with the aid of bar graphs. There's also support for curve comparison options that show the collected curves of a battery over a time period where the battery gets used. Configuration settings DataExplorer lets you set up several general parameters related to time format, data path, file saving, CSV separators, blacklists and whitelists, graphics (e.g. draw scale baseline, name, and scale numbers in record color), data table optimization, and charging devices. Plus, you can register MIME type, create link files and check resource consumption, as well as set

## **DataExplorer Crack+ Full Product Key Free (2022)**

Key Features: Monitor device status and activity in real time Gather data in database Monitor multiple channels and devices Analyze data Present data in an easy to read manner Save data to file, including raw and interpreted data Export data to XML and CSV format Analyze data in history and overview mode Automatically scale display for data trends Save & export data graphically Capture related data tables Gather data by time interval and apply graph templates Presenting data in graph view mode Manage file access Generate Java / MATLAB codes Manage and create links Exporting data to KMLZ format and Google Earth Capture data in numerous modes Don't forget to check out our other useful applications for Android, Windows, iOS, and more! Use this tool to automatically evaluate the health of your plants and optimize the watering schedule. Watering is the main method used to grow plants. It is related to the increasing amount of evapotranspiration, which is directly related to the temperature and the relative humidity. Before starting to use this application, you should provide valuable data, it's necessary for the application to work correctly. That is why you have to set up the temperatures, the starting time and the maximum duration of watering. You also have to set the minimum amount of water required for your plant. The application uses these data and adapts them automatically. You can also set a minimum and maximum gap between 2 watering sessions. You must then put a minimum value, which you want to receive with the last watering session. You should also indicate a minimum and maximum amount of water between the 2 watering sessions. If you miss one of the minimum requirements, then the watering session is stopped automatically. You also have the ability to monitor the status of your plants and visualize the data you are seeing with the Watering counter. Based on the data you have provided, the application gathers the evapotranspiration of your plants and allows you to get a complete report. You can also compare your daily values with the previous ones. You will be able to set the date, the watering duration and the intensity of the watering. The application also supports the following water quality parameters: salinity, calcium and magnesium concentrations, nitrate and nitrite concentrations, and pH. If you want, you can also set the number of watering sessions you want and install a reminder for your watering sessions. You can also test your plants on Google 3a67dffec

## DataExplorer Crack+ License Key

DataExplorer is a professional application, designed specifically for helping you collect, analyze and view information from devices with a serial port or other CSV-like or USB port. Data Explorer works with data loggers, measurement and charging devices, or other similar ones in order to gather measurement data, present it graphically, and generate comprehensive statistics. You can use Data Explorer to collect almost all data that is sent over serial port as well as USB port data using communications between computers. While receiving data from serial port, some data is masked, processed in the background, that's why we set up Data Explorer interface so that you can easily extract all information from masked data. Moreover, Data Explorer can analyze gathered data and display it with numerous info such as text, table, graphs, etc. Also, Data Explorer can export data to various formats such as \*.CSV and \*.KMLZ. Available Operations: - Measurement Data is collected by Ethernet interface in Windows or \*nix based systems. Local backup support for \*.CSV file format. Most of the device information can be displayed in tabular, text or graph format. Supported Devices: - Gas - Magnetometer - Honeywell - Zigbee - MQ-3 - MP210, MP-240 - PSD-3 - RMS-3 - RS-3 - WX-10 - DS-10 - ADE-10 - ADTR-10 - MSR-10 - EBS-10 - LX-10 - HP-10 - WE-10 - DIN-10 - DSC-10 - DSQ-10 - HC-10 - PC-12 - PECO-10 - OC-10 - B-15 - B-16 - B-17 - B-31 - B-32 - B-41 - B-42 - B-51 - B-52 - B-52-10 - B-53 - B-54 - B-55 - B-62 - B-63 - B-64 - B-65 - B-66 - B-73 - B-76 - B-77 - B-78 - B-79 - B-80 - B-81 - B-83 - B-84 - B

## What's New In DataExplorer?

Backed by the Global Technology Leader Microsoft, DataExplorer is a premium-class software application designed specifically for helping you collect, analyze and view information from serial port or other CSV-like or USB port devices. DataExplorer is developed to assist in the process of industrial battery cell lifecycle analysis, since it can record all of the relevant information and store it all conveniently in a single file. Also, it can display voltage values graphically, so that you can easily monitor the life of a Lithium ion cell during normal use. DataExplorer will also help you keep records of your cell life and other information and make an analysis of it, such as charge and discharge curves. If you want to know how many and what types of charger are in use, all you need to do is to set the serial port in which the chargers are connected to and then specify the interval for which you wish to record the data. Besides, DataExplorer lets you record all the relevant information in a single file for transfer to another device, and even provides a Graphical User Interface (GUI) to simplify the data capture process. Whether you use advanced measurement devices, such as battery testers or capacity gauges, DataExplorer is designed to give you a complete

---

overview of the data, while analyzing and displaying it in a convenient way. User Interface The tool adopts a multi-tabbed layout where various pieces of information are placed at your fingertips, such as graphs, statistics, tables, file comments and object characteristics. At the bottom of the main window you can check out the serial communication status, like connected, receiving and transmitting, progress of long operations, as well as warning messages or measurement results. History, importing and exporting options DataExplorer reveals a list a list with the last used fields (maximum 10 entries), and lets you import/export data from/to CSV file format with absolute or raw details, as well as print the information. GPS data can be exported to KMLZ file format and launched with Google Earth. Working with graph data and devices The tool gives you the possibility to zoom in or out of the generated graph, copy the graph to the clipboard, apply various graphics templates according to the device and channel configuration, and hide or show graphics header and data set comment. Statistics and other collected pieces of information DataExplorer is able to provide statistics about the measurement data (e.g. voltage, current, power, energy, velocity), unit, minimum and
