A simple and rapid technique has been developed for detecting measles virus, by a RFLP method. The method allows for identification of the virus from clinical samples within two days. This technique is based on the highly variable N protein gene of the virus, which is amplified by PCR in the presence of restriction enzymes, followed by electrophoresis. It can be utilized both for clinical purposes and for virus titration, since the method is performed prior to amplification of the virus genome.Q: Google Chrome doesn't like this.htaccess code I've put together a pretty basic.htaccess file to mimic the way the Google Chrome store treats my images.
