What's New In?

In the interest of making AutoCAD easier to learn and more accessible to new users, we've done some streamlining of the user interface. We've eliminated the "live" ribbon from the Design and Annotate tabs. We've also made some changes to the ribbon so it's more consistent across the products. In addition, we've added a new "new" button to the ribbon so you can see all the commands in one place without scrolling through long menus. In AutoCAD for Android, we've made many improvements to the auto-reload feature. Users can now reload a drawing with minor changes made while in preview and the drawing is more robust and usable in the event that the connection to a server is interrupted or that the drawing data is corrupted. In CAD for PDF, we've made changes to how drawings are loaded. You'll no longer have to install the entire release if you only want to use a new CAD product. In addition, we've eliminated the "per file" license usage model. If you install CAD for PDF, you'll have a license for that product only. Other Changes in the Product: The Text Style property is now only enabled for the text object. We've made some changes to how things work with AutoCAD in the cloud. Now, you can continue to work even if your CAD subscription expires. We've removed the "cloud" from the name of the product, so you know you have AutoCAD for cloud when you look at your available products. When you switch to a 2D view in AutoCAD for cloud, you can now see your last project name in the title bar of the canvas. The Amazon S3 file format now works as you'd expect. When you save files to Amazon S3, it won't cause any errors to be written to your drawing session file. We've changed the way frames are displayed in the Tape Measure. If you have a frame active and you see a tape measure, you'll now be able to slide the view of the tape measure back and forth along the canvas to see the distance between it and the frame. We've changed how the snap lines appear in the Tape Measure view.
