popular file formats such as XML, CSV, DBF, TXT, RTF, HTML, PPT, XLS, XLSX Supports all file types, excluding of course WINDOWS file types Great user interface We talk about this application for its ease of use, for the fact that the application is intuitive enough to let anybody work with files

in a practical way. Its interface works in three phases. The first one is the target area, the second one is the list of duplicate files and the third one is the result, which consists of selected or removed items. Default features

The application is very simple, but has many improvements that make

it worthwhile. Apart from the three phases mentioned above, you can include other folders, set the kind of duplicates to detect, or set the format of the file to be searched. The application is a very unique application, given the vast number of features that come with it. There are two main

methods of operation:
automatic and manual.
On the automatic
selection side, the
application has an option
to search for duplicates
based on the file name,
which works very fast,
provided that you have a
lot of files to remove, but
may miss small
differences. Sorting files
based on size is also an

option, but this has its drawbacks. There's also the manual selection option, which is just what the name says: you need to handpick every file you want to remove, or just some of them. You can either pick up files by clicking on them with your mouse, or load a list of files and proceed to remove them all. A

feature that is particularly useful is the ability to generate a list of duplicates for backup purposes. Conclusion This is a really good application, and one that's very easy to use. You have to choose the kind of files that you wish to remove, and Ayrun makes it very fast to generate a list of the

Ayrun is a small tool which enables you to get rid of duplicated files and folders. Duplicated files are files which have the same inodes (for files) or the same hard link values (for folders). Inodes are file system structure numbers that identify files, and hard link is a label that can be

used to access the same physical file more than once. Duplicates get into your computer when you delete files, copy files, zip up or extract files, or backup and restore. In order to get rid of duplicates, Ayrun indexes a folder and searches for duplicates. If a duplicated file found, it will be copied into a

new folder automatically. New in version 1.7: 1. Duplicate files searching is much faster. 2. Adding and browsing multiple folders (recursively) is now supported. 3. Folder browsing is more convenient. 4. It is now possible to search for duplicates even on open folders (i.e., folders that are not indexed). Ayrun
