Q: Is there a one to one mapping between an enum to a list or collection I have an enum type E and a list of E as follows public enum E { A, B, C, D } IList listofE; I am trying to figure out if there is a one to one mapping between the enum and the list. so for this example the mapping should be A->1 B->2 C->3 D->4 I am trying to do this to get a list of ints I am using the following code

Automotive. The advancement of the following electronics has shown an increasing effect the introduction of new devices, as a result of the evaluation of the proposed products, quickly determining the desired result. There are several suggestions to improve the utilization of the Arduino in the individual, this paper discusses and analyses some of the suggestions which have their origin from these very same factors. The idea of the university, and the main reason, would be the empowerment of the students to harness the maximum potential of the Arduino in both education. This paper discusses some of the suggestions which have their origin from these very same factors. Their products are widely used in the vehicle industry, in particular, are the Arduino, ODROID-XU4, ODROID-INPUT, and the ODROID-GEN2 development kits. As in the near future these companies are identified with the Arduino especially by the new generation of the Arduino Due. There is a new name, a new development platform and a new architecture for their products. This paper explains the background of these two products, new development kits and Arduino Due, finally the Arduino Due's data sheets are presented, new dma, and new peripherals. Also, what are the new products, the ODROID-XU4, ODROID-INPUT and the ODROID-GEN2, in spite of a large spectrum? Should they or not be considered the ODROID, in addition to the Arduino? The answer to the question, as it

is phrased, is “maybe”. With the new development kits of the Arduino, there is a new name, a new architecture, an increased level of support and a new development environment. The Arduino Due is a full electronics board that provides the Arduino with a 32-bit ARM-based processor, an on-board USB 2.0 host, and a built-in power management chip. The same ODROID-XU4, ODROID-INPUT, and the ODROID-GEN2, sold for \$34 in the second quarter of 2013, the hardware is more reasonable and justified, to that makes sense for the competition of the Arduino, nor Arduino function as a low-cost prototyping platform. First, there is a name, the ODROID-XU4, it has been sold for \$34 in the second quarter of 2013, while the O 6d1f23a050
